Detection Technology in brief

Detection Technology is a global provider of X-ray detector solutions and services for industrial, medical and security applications. The company's net sales increased by 4% to EUR 108 million in 2024, and operating margin (EBITA) was 14%.

The company has around 600 active customers in over 40 countries. Detection Technology employs around 490 people in Finland, China, France, India, and the US. The company's shares are listed on Nasdaq First North Growth Market Finland under the ticker symbol DETEC.

Review by the President and CEO

Agility, growth, and profitability

2024 was a year of strong performance and adaptability for us at Detection Technology. Despite a turbulent operating environment, our agility enabled us to stay on course and even grow. Our competitiveness advanced, profitability improved, and cash flow strengthened significantly. We are more prepared than ever to drive the company forward.

As in the year before last, the operating environment did not make growth easy. Geopolitical tensions, global economic uncertainties, and China's healthcare reform affected demand. Nevertheless, we managed to increase our total revenue by 3.6%, reaching EUR 107.5 million. This was largely driven by strong security sales, but also by industrial sales.

The industrial sector saw a clear turnaround for the better. The food industry and industrial CT imaging performed well, and our Industrial Solutions Business Unit (IBU) grew by 18.2%, reaching net sales of EUR 19.0 million. This growth was driven by legacy sales and the increased demand for TFT flat panel detectors.

Challenges in the medical market continued. China's healthcare reform and the associated anti-corruption campaign targeting end operators delayed purchasing decisions, while price competition intensified. This was reflected in the sales of our Medical Business Unit (MBU), which declined by -12.8% to EUR 42.2 million.

In the security sector, the trend was positive. The market grew at a faster-than-expected pace, with particularly strong demand in developed markets outside China. Airport system upgrades and border security investments supported this growth. Our Security Business Unit (SBU) grew by 17.8%, reaching net sales of EUR 46.3 million, accounting for 43.1% of our total net sales.

From a geographical perspective, no significant changes occurred. The Asia-Pacific region remained our largest market, accounting for 67.2% of total net sales. Similarly, the share of our five largest customers in total net sales remained nearly unchanged at 52.0%.

Although growth was moderate, profitability improved exceptionally well. Our operating profit (EBITA) was EUR 14.9 million, representing 13.9% of net sales. This indicates that we have successfully enhanced our efficiency and benefited from a favourable sales mix. Additionally, strong cash flow enabled the early repayment of the long-term loan taken for the Hao-bo Imaging acquisition.

Investments in the future

Our commitment to future growth was also reflected in our strategic investments. We are expanding production to India, where infrastructure investments are experiencing strong growth. Our newly established service and production site in the Greater Delhi area will begin deliveries in the summer of 2025. This initiative supports both our competitiveness and risk management.

Similarly, we expanded our EU-origin production at our new Oulu facility. This enables us to manufacture 10% of our global product sales in Finland. It enhances the customer experience, increases flexibility, and

“

Despite a turbulent business environment, we stayed on course. Our sales grew, profitability improved, and cash flow strengthened significantly.”

mitigates risks against the macro-economic uncertainties.

We have maintained a strong pace in product development. We introduced a highly integrated CT detector system that adapts to various applications and launched as many as 60 new flat panel detectors for global sales.

At the end of the year, we also implemented an organizational change that took effect at the beginning of 2025. The new regional business units assumed full responsibility for sales and customer relationships. We are confident in future growth, as our new op-

erating model creates better conditions to navigate competition and a turbulent business environment.

Although the markets remain challenging, the outlook is better than a year ago. We believe that the growth drivers remain strong, and we are well positioned to continue profitable growth in 2025.

Thank you to our customers, owners, the DT team, and partners for the year 2024! Let's keep moving in the same direction and make 2025 even stronger.

Hannu Martola
President and CEO

Sustainable development goals

For a more sustainable future, we are committed to aligning our actions with our sustainability agenda. We continued to refine our operating model and strengthen our values-driven company culture to better support our sustainable development goals.

Our way to manage sustainability complies with the certified ISO standards, and we acknowledge and continuously implement the Code of Conduct of the Responsible Business Alliance (RBA). We have set metrics to measure our sustainable development in every area of our Code of Conduct —quality, environment, business ethics, people, and occupational health and safety.

In 2024, the themes and subitems of our sustainability agenda remained unchanged from 2023. After careful analysis, we have decided to maintain a similar structure for 2025. The table on the next page provides a detailed overview of the 2024 outcomes and the targets set for 2025.

We achieved all the goals set for 2024, except our energy intensity reduction target. Over the years, we have achieved significant reductions in our energy intensity through various initiatives, including technology upgrades, implementation of best practices, and facilities improvement.

From 2025, we expect a more stable performance

on this key area as the most significant opportunity areas have been addressed. At the same time, we foresee an increase in certain energy-intensive processes. However, we remain committed to having energy-efficient operations and will continue to monitor and improve our performance.

Driven by culture and incentives

In 2024, we continued to promote our values and values-based behaviors, fostering greater employee engagement in sustainable practices and actions. This commitment has led to a noticeable shift in mindsets and behaviors at the company, team, and individual levels.

Furthermore, sustainability key performance indicators (KPI) have been embedded in our incentive plans to ensure a focus on driving transformation and achieving our sustainable development goals in 2025 and beyond. Our short-term incentive (STI) plans apply to all DT employees, and sustainability is integrated as a key metric in our share-based long-term incentive (LTI) scheme.

Sustainable development goals

Themes and items	Metric	2024 target	2024 result	2025 target

Our journey towards a more sustainable future

Our way of conducting responsible business stems from our vision, mission, and values — integrity, simplicity, driven, and result. We care for the environment and society — as well as each other, and we strive for sustainability.

Sustainable development is an ongoing journey towards the common good. We are delighted to share key milestones from our progress in 2024 as we move towards a more sustainable future.

The highlights are presented based on the framework of the Responsible Business Alliance (RBA) and our Code of Conduct. Our quality, environmental, business ethics, people, and health and safety policies create the DT Code of Conduct.

Quality

In 2024, we conducted the surveillance audits for our Management System against the requirements of ISO 9001:2015 and ISO 14001:2015 for our sites in Oulu and Espoo, Finland, and Beijing, Shanghai and Wuxi, China, and ISO 13485:2016 in Shanghai and Wuxi. At the end of the year, 97% of our employees worked on the ISO-certified sites.

We have taken our approach to continuous im-

provement beyond the standards. We continued to systematically apply Six Sigma, which is a disciplined, data-driven approach and methodology for reducing variation in all processes, from manufacturing to business processes, and from products to services.

The number of Six Sigma-trained white-collar employees has been our key performance indicator for several years. We successfully continued our Six Sigma Yellow Belt and Six Sigma Green Belt certifi-

cation programs. By the end of 2024, 96.2% of our white-collar employees had been trained in Six Sigma methodology.

In addition to these programs, we launched a new program dedicated to training in specific Six Sigma tools. This new initiative aims to enhance the practical application skills of the participants within their specific fields or roles. This approach fosters a more

tailored and effective application of Six Sigma methodologies throughout the entire organization.

At Detection Technology, we encourage our employees to share any improvement ideas that can contribute to the overall improvement of our company. In 2024, we exceeded our goal of completing at least 1,500 Kaizen activities globally.

1,539
Kaizen activities

Kaizens by type

- Cost 18%
- Quality 21%
- EHS 15%
- Productivity 46%

Environment

Environmentally responsible solutions are essential. As a key player in the X-ray imaging industry, we continuously strive to minimize our environmental impact while developing innovative solutions and services that address global environmental challenges.

We see circular and eco-economies as valuable business opportunities. X-ray imaging is increasingly used in recycling, sorting, optimizing manufacturing processes, and ensuring the quality of components like electric car batteries. Through these applications, our solutions contribute directly to a more sustainable and environmentally positive future.

We continued to develop and measure the environmental sustainability of our business. We have not received information on any environmental infringements in the fiscal year 2024.

Our environmental management system was audited against the requirements of ISO 14001:2015,

with no major findings. At the end of 2024, 97% of our employees worked at ISO 14001:2015-certified sites.

myDT+ enhancing sustainability

One of the key highlights in enhancing sustainability was the promotion of our unique myDT+ service portfolio, designed to reduce waste and maximize resource efficiency. We continued to advance this comprehensive range of services to enhance the longevity and reusability of our detector solutions, among other benefits. The myDT+ portfolio offers value-added customer support throughout the entire product life cycle—from piloting new technologies to end-of-life recycling—ensuring sustainable and efficient use of resources.

Another key initiative in 2024 was selecting more sustainable transportation options provided by our freight partners to reduce CO2 emissions in our logistics operations. This effort reinforces our commitment to minimizing environmental impact and

Examples of climate-smart X-ray imaging applications

Battery manufacturing

X-rays detect failures efficiently for safety and performance of lithium batteries manufactured for electric vehicles, consumer electronics, and renewable energy storage systems.

Manufacture of renewable energy technologies

X-rays enable the rapid non-destructive, detailed inspection of the internal structure of wind turbine blades to reveal defects which could otherwise lead to costly failures.

Electricity generation from bioenergy

X-rays are used for the sorting and grading of biofuels to identify contaminants such as rocks and soil which may cause damage to machinery, and to the in-line measurement of moisture.

Material recovery from non-hazardous waste

X-rays provide a highly effective means of sorting waste based on density or atomic number with the ability to distinguish materials that are not possible with other technologies.

promoting greener practices across our operations.

We increased the use of renewable energy at our site in Wuxi, China, to reduce CO2 emissions. Due to existing policies in Beijing, procuring green electricity from the open market is not yet possible. We continue to monitor policy developments and aim to implement green electricity at our Beijing manufacturing site as soon as regulations allow.

We continued to refine our Design for Environment (DfE) processes and tools to minimize the environmental impact of our detector solutions throughout

their entire life cycle. This methodology is applied from the concept phase and is continuously reviewed during product development. Key considerations include material selection, energy efficiency, manufacturing techniques, packaging, and end-of-life disposal. DfE has been an integral part of our R&D and other processes for several years, reinforcing our commitment to sustainable innovation.

Additionally, we raised awareness by encouraging our employees to take part in global environmental initiatives. This included participation in Earth Hour in March and World Environment Day in June.

Business ethics

Our Code of Conduct consists of the company's quality, environmental, business ethics, people, and occupational health and safety policies. Our internal and external stakeholders are regularly informed of the Code of Conduct, and it is available on the company's website.

In 2024, the practice of onboarding training and other communications related to the Code of Conduct remained consistent with previous years. A notable change in 2024 was the integration of the Code of Conduct into our new HR system. This enhancement ensures that all new employees, as well as existing staff when updates are made, are required to formally acknowledge their review and approval of the code. This improvement strengthens compliance and accountability across the organization by streamlining the confirmation process and improving visibility into employee engagement with the Code of Conduct.

All DT employees are responsible for following and promoting this code within our business ecosystem. We expect our suppliers and other partners to conduct their business in compliance with the same standards. We encourage our employees to report any compliance concerns.

DT has a whistleblowing channel which provides an opportunity to report on suspected wrongdoings affecting people, our organization, society, or the environment. The whistleblowing channel can be used to report about any violations of cases of misconduct, such as bribery or corruption, other illegal activities, acts, or actions in violation of our Code of Conduct.

The whistleblowing channel complements our other feedback channels, and it is available for both internal and external stakeholders. We have not received notifications on any infringements of EU or national laws or our Code of Conduct through the whistleblowing channel or other reporting channels in 2024.

In 2024, we continued our supplier sustainability evaluation program. The program includes the themes covered in our Code of Conduct: quality, en-

vironment, business ethics, people, and occupational health and safety.

In 2024, local authorities in China conducted anti-fraud training sessions, which were shared with local staff to enhance their awareness and knowledge. Additionally, improvements were made to our data security through system and tool upgrades. We established and published a comprehensive policy for the responsible and secure use of generative AI tools. This policy plays a crucial role in protecting intellectual property, ensuring the security of our innovations and partnerships.

We are committed to supporting the responsible sourcing of minerals. We have adopted a conflict minerals policy and communicated it to our suppliers. Together with them, we ensure that no conflict minerals are used in DT products.

Occupational health and safety

We aim to make a positive impact on people's health and safety. We achieve this through our products, services, and by prioritizing the well-being of our employees and partners. We continuously take actions and implement measures to maintain and enhance our safety culture.

Our initiatives include providing training, making regular announcements, organizing theme month activities, and establishing a feedback channel for our employees to report hazards and share improvement ideas. Employees are also rewarded for their contributions to the advancement of occupational health and safety (OH&S).

In 2024, we introduced a new key performance indicator (KPI), the Total Recordable Incident Rate (TRIR), and successfully achieved our target of ≤ 2 . This KPI provides enhanced visibility into incidents, allows us to benchmark performance against industry standards and competitors, and fosters a culture of transparency by encouraging employees to report cases.

We recorded a single minor lost-time incident. To prevent similar occurrences in the future, our Environment, Health, and Safety (EHS) team enhanced safety measures and strengthened our guidelines.

These improvements were communicated through internal announcements, and training sessions. Additionally, the lessons learned and preventive measures were shared across all sites to ensure their effectiveness company-wide.

In February, our people in Oulu moved to a new facility designed with a strong focus on occupational health and safety. The facility, tailored to our business needs, provides increased floor space, enabling new features that promote well-being and minimize safety risks. For example, we have made significant improvements to ergonomics.

Our manufacturing site in Beijing was re-certified under China's Work Safety Standardization. This certification is awarded to companies that comply with national workplace safety standards and have implemented effective practices to identify, manage, and mitigate work-related risks.

We participated in China Work Safety Month, the 23rd annual theme month, by organizing various activities in our units across China. Additionally, we held a variety of information sessions, training programs, and drills at multiple sites globally, focusing on topics such as chemical safety, emergency first aid, and fire safety.

People

Committed, inspired and well-being professionals are the foundation of our success. We strive to create an employee experience that empowers our people to reach their full potential. We value the diversity of our workforce and foster a values-based company culture that encourages open dialogue and constructive feedback.

The number of personnel remained stable. At the end of 2024, we employed 487 (478) people. The number of personnel increased by 2% year-on-year. A total of 378 people worked in China, 95 in Finland, 10 in France, and 4 in the US. Most of our employment relationships are permanent.

Overall, our employee turnover was moderate. At the DT Group level, voluntary turnover decreased to 8% (10%). We believe this positive trend reflects our employees' overall satisfaction and engagement with DT as a workplace, as well as their confidence in our future and the opportunities we provide. Additionally, the general uncertainty in the labor market has contributed to lower turnover.

The share of women remained stable and above the technology industry average. Of our personnel, 40% (40) were women and 60% (60) men. At the end of the review period, 13% (25) of the Group's management team members were women.

The number of nationalities represented in our company decreased slightly in 2024. Our company employed people from 13 nationalities (16). At DT, diversity extends beyond cultural background and gender.

Successful completion of Haobo Imaging integration

With strong employee engagement and positive feedback, we are pleased to announce that the integration of Haobo Imaging has been a success. This milestone has enriched our culture, enhanced our operational capabilities, and provided learning opportunities across our global sites.

In 2023, we acquired Haobo Imaging, welcoming over 40 new colleagues to the DT team and expand-

ing our global footprint with a new site in Shanghai, reinforcing our presence in a key market. The site has retained an independent role in developing its flat panel detector business.

However, the sharing of expertise at the DT Group level was recognized as extremely important from the start of our joint journey, as was the harmonization of work practices and business processes. We have successfully advanced these areas over the past year.

While we have made great progress, learning and knowledge sharing remain key priorities. By continuing to foster collaboration and innovation, we will drive long-term success and growth.

The new Oulu site elevates employee experience

Our Oulu team has been operating from the new premises since February 1, 2024, with production now successfully ramped up. The new site is designed to foster cross-functional collaboration and promote employee well-being and overall experience.

To gather feedback from employees, a survey was conducted in June, covering key aspects such as how well employee input was taken into account during the design phase and people's perceptions of ergonomics, soundscapes and acoustics, as well as the balance between community and privacy. Overall, the feedback was positive, though some areas for improvement were identified. As a result, action plans have been developed to address these needs.

New operating model well received

We established a new organizational structure and operating model, which has been effective as of January 2025, to support our strategic direction. Our new sales and product organization consists of three regional business units: APAC, EMEA, and the Americas. The change has been well received by our people, and the feedback so far has been encouraging.

We also took employee feedback into account when planning and implementing this change, actively in-

volving our people in shaping the structure and defining our future direction. Through this process, we have also created new and exciting opportunities for career development and growth, reinforcing our commitment to fostering a dynamic and engaging workplace.

Living our values

We are committed to embodying our values—integrity, simplicity, driven, and result—in everything we do. These principles guide our decisions, shape our way of working, and help us attract and engage top talent.

In 2024, we continued to reinforce our values-driven culture across various initiatives. Our approach to leadership development is built around values-based behaviors, which are embedded in our leadership principles and daily practices. Our values also play a key role in Employee Development Discussions (EDD), ensuring they remain an integral part of professional growth.

To recognize values in action, we continued the Values Champion Awards, celebrating employees who exemplify our principles in their daily work. The program, built on peer feedback, follows both global and local recognition models, reinforcing our feedback culture and strengthening our shared values.

Serving our people online

As part of our commitment to operational excellence, we introduced a new Human Resources Infor-

mation System (HRIS) in 2024. This advanced people platform is designed to automate processes, elevate the employee experience, and drive engagement.

The new system streamlines workflows, saving time through automated processes while offering an intuitive and connected experience for our people. To ensure inclusivity and a smooth transition, we involved our employees as ambassadors, fostering collaboration and a sense of ownership throughout the implementation process.

DT Heartbeat pulse survey

We measure the employee experience, including feedback on values-based behaviors and leadership, through the DT Heartbeat pulse survey. This biannual survey enables us to gain quick and deep insights and act on development areas in a timely manner. In addition, it allows us to carry out benchmark analysis among industry peers and helps track our development trends for external stakeholders.

In 2024, we carried out two surveys. The first survey was conducted in May and the second in November. The response rate was 88% for the first half (H1) and 78% for the second half (H2) of 2024. The average score was 3.4 for H1 and 3.4 for H2 on a scale of 1–4. The outcome reflects strong employee engagement and alignment with the company's goals and culture. The feedback has been analyzed, and development measures have been selected in collaboration with our personnel.

Highlights of employee development programs

Program	Kicked off	Number of participants by the end of 2024
Six Sigma Target group: white-collar employees	2010	252 (211)
Lean manufacturing based on the Toyota Production System (TPS)	2016	115 (107)

Advancing children's rights with ACI

In 2024, we reaffirmed our commitment to advancing children's rights and global education as an active member of the Ahlström Collective Impact (ACI) network. Through our collaboration with UNICEF Finland, we have been able to make meaningful contributions to children worldwide.

As a result of the collective efforts of the ACI network, nearly EUR 800,000 was invested in UNICEF's global education program. This essential funding supports millions of children, granting them access to quality education and brighter opportunities for their future.

Engaging our people and communities

Throughout the year, we promoted internally and externally children's rights as part of our engagement within the ACI network. Our ACI Ambassadors played a crucial role in driving awareness and fostering a sense of community within our organization and beyond. Their ongoing efforts have helped integrate children's rights into our corporate culture and stakeholder engagements.

A key highlight of our efforts was the celebration of World Children's Day in November, where we took deliberate steps to increase awareness among our

personnel and stakeholders about the importance of children's rights. To maximize the impact, we conducted online awareness campaigns to engage a wider audience, and on-site activities were organized to create an immersive experience for our employees and their children.

In addition to awareness initiatives, we participated in a UNICEF Finland study that mapped how Finnish-listed companies address children's rights. The study's insights provided valuable perspectives, prompting us to take further actions to strengthen our commitment and enhance our initiatives in this critical area.

We remain steadfast in our mission to champion children's rights and global education. As we look ahead, we are committed to furthering our collaboration with ACI and UNICEF Finland, ensuring that every child has the opportunity to thrive.

In partnership with UNICEF Finland, the ACI network supports global education work.

About ACI

Ahlström Collective Impact (ACI) is an internationally recognized network that unites public and private companies, foundations, shareholders, and employees to act together with UNICEF Finland for the rights of children and a greater global impact. With UNICEF and ACI, we have an international network of true change-makers who believe in the power of collaboration. The network has the passion and courage to spark changes in global societies for future generations.

The ACI network boosts the realization of the United Nations' Sustainable Development Goals (SDGs).

ACI investments are directed to UNICEF programs that support annually selected SDGs.

ACI was initiated by the Eva Ahlström Foundation in 2020. At present, the ACI network members are Ahlstrom, A. Ahlström, Ahlström Invest, Avain Yhtiöt, Destia, Detection Technology, Eva Ahlström Foundation, Glaston, M&J Recycling, Suominen, and Walter Ahlström Foundation. Detection Technology became a member in early 2022.

Learn more ›

CSRD reporting

In the fiscal year 2024, we started preparations for reporting in accordance with the Corporate Sustainability Reporting Directive (CSRD). Under the original EU regulation, Detection Technology is required to comply with the CSRD reporting obligation in 2026, when publishing its 2025 financial statements.

By the end of the fiscal year, we completed the double materiality assessment (DMA). This process provided insights and facilitated deeper discussions with customers, suppliers, employees, and other

stakeholders about key sustainability topics and trends material to our company.

The EU Commission announced on 26 February 2025 legislative proposals aiming to simplify the CSRD reporting obligation. If these proposals are put into effect, they will most likely have an impact on our CSRD reporting obligation. In 2025, we will closely monitor how the situation unfolds and adjust our CSRD project accordingly.

Re-certified as a Nasdaq ESG Transparency Partner

Our company was re-certified as a Nasdaq ESG Transparency Partner. This recognition is presented to companies that display a high level of transparency on environmental, social, and governance issues (ESG) to its current and future investors, and its customers. The Nasdaq ESG Matrix ESG data points are included in our company's sustainability agenda.

DT way to manage sustainability

The DT way to conduct responsible business stems from our vision, mission, and values—integrity, simplicity, driven and result. The DT way is business-driven and closely linked to our company culture, which aims to provide a unique customer experience and excellence in quality. It is all about how to treat people and the environment, and how to foster financial performance now and in the future.

We manage sustainability via our ISO 9001:2015-, ISO 14001:2015-, and ISO 13485:2016-certified management systems, and we acknowledge and continuously implement the Code of Conduct of the Responsible Business Alliance (RBA). The RBA Code of Conduct is a set of social, environmental, and ethical industry standards that comply with international laws and practices, such as the Universal Declaration of Human Rights, ILO International Labor Standards, OECD Guidelines for Multinational Enterprises, and ISO and SA standards.

The everyday work of our employees, DTians, is guided by the principles set forth in the Code of Conduct and many other company policies. Our quality, environmental, business ethics, people, and health and safety policies create the DT Code of Conduct. These policies ensure that working conditions are safe, employees are treated with respect and dignity, and business operations are environmentally responsible and ethically conducted.

Our management and employees have the obligation to comply with the Code of Conduct and to promote its implementation within our business ecosystem. We expect our suppliers and other partners to comply with the same standards in their business operations and aim to ensure that they, in turn, also expect the same of their partners.

The Code of Conduct is available on our website www.deetee.com/company/sustainability

RBA

The Responsible Business Alliance (RBA) is a nonprofit coalition of companies dedicated to improving social, environmental, and ethical conditions in their global supply chains. The RBA was founded in 2004, and it was formerly known as the Electronic Industry Citizenship Coalition (EICC).

Main events and releases in 2024

30 January

DT appointed Matti Nylander as CFO and a member of the management group. He started in the role on 13 May 2024.

[Read more >](#)

28 February — 3 March

DT showcased its off-the-shelf and customized solutions for medical CT and surgical imaging at the ECR show in Vienna, Austria.

2024

1 February

DT's facility project in Oulu, Finland progressed on schedule, and the Oulu team started working at the new site.

27 February

DT introduced the X-Panel 1501c FXM, a CMOS technology-based flat panel detector solution for panoramic imaging to complete its offering for dental applications.

20 March

DT celebrated the grand opening of the new Oulu site with customers, investor community and other key stakeholders.

11 April

DT announced the global availability of an IGZO-TFT and a-Si-TFT flat panel detector portfolio for medical and industrial applications.

[Read more >](#)

27–31 May

DT showcased its line scan and flat panel detector solutions at the WCNDT exhibition in Incheon, Korea.

**11–14 April**

DT showcased its standard flat panel and CT detector solutions at the CMEF show in Shanghai, China.

**23 May**

DT enhanced dental imaging and launched IGZO-TFT flat panel detectors for cone beam computed tomography (CBCT) and panoramic imaging applications.

12 November

DT announced the global availability of its X-ray flat panel detector portfolio, featuring over 60 products.

[Read more >](#)

**30 October — 1 November**

DT showcased its portfolio for industrial applications at the Q.C. exhibition in Shanghai, China.

18 November

DT announced that it will unveil a comprehensive detector portfolio at the RSNA exhibition to advance medical imaging.

[Read more ›](#)

20 November

DT celebrated the World Children's Day together with the ACI network in order to raise awareness of child rights.

1–4 December

DT promoted its flat panel offering, CT solutions, and plans to be a forerunner in photon-counting CT (PCCT) solutions at the RSNA show in Chicago, USA.

**12–14 December**

DT exhibited at the NDE exhibition in Chennai, India and promoted its upcoming "Made in India" offering.

**22 November**

DT celebrated Children's Day at Work with a number of different activities.

**2025****28 November**

DT introduced an all-in-one CT detector system that simplifies data transfer and system architecture and drives next-generation imaging solutions.

[Read more ›](#)

**19 December**

DT had the honor of hosting the Ambassador of India to Finland, Mr. Hemant H. Kotalwar, at its Oulu office.

**20 December**

DT announced its collaboration with ThinkOrbital to advance space technology.

Global footprint expanded for Made in India

In 2024, we expanded our global footprint by establishing a service and production facility in the greater Delhi area, India. This move is designed to enhance customer experience by offering local service, shorter response and delivery times, and cost-effective local product solutions, all while maintaining high standards of quality.

We are excited to expand our operations into the growing Indian market and serve our customers locally with the dedication and excellence that define us worldwide. India is about to spend big on infrastructure, namely in the healthcare, traffic, and manufacturing industries, and we want to be there to promote these projects. For example, more than 100 airports will be built in India over the coming years.

Local production ramping up

Construction of the site and production capabilities is underway, and we are ready to ship “Made in India” products in the summer of 2025. In the initial phase, our focus will be on the final assembly and testing of high-quality detector boards optimized for security X-ray imaging applications. We plan to quickly scale up our operations to include the as-

sembly of TFT (thin-film transistor) flat panel detectors, catering to the diverse needs of the domestic industrial and medical X-ray imaging markets.

Our new facility will be equipped with state-of-the-art technology and staffed by experts committed to upholding the highest industry standards. We will also offer product demonstrations to assist our customers in selecting the most suitable detectors for their specific imaging applications.

The service and production facility is located in an industrial hub, Cyberwalk Tech Park, in the Delhi area with excellent connections to all corners of India and the rest of the world. The Indian subsidiary fully owned by Detection Technology is registered as DT Detection Technology India Private Ltd.

EU manufacturing to enhance customer experience

In 2024, we successfully expanded our EU manufacturing and completed our facility project in Oulu, Finland, within the planned schedule. This strategic investment has strengthened our global competitiveness and supported us in risk mitigation.

Our Oulu team has been working on the new premises as of 1 February 2024 and the grand opening of the site was held on 20 March. It was our pleasure to introduce our business and Finnish manufacturing to our customers, investor community, and other key stakeholders.

The manufacturing of EU-origin products at the new site commenced, with the first deliveries successfully made in Q2. The production ramp-up has progressed according to plan, and by the end of 2024, we had the capability to manufacture 10% of our global product sales in Finland.

Warmly welcomed

The expansion of our production capacity in Finland allows us to offer a wider range of EU-origin products, strengthening supply chain resilience and minimizing associated risks. The new facility has been

well received by our customers, who appreciate its role in improving delivery speed and customer support.

With these enhanced capabilities, we are now better positioned to serve our European and American markets more efficiently. Our EU manufacturing not only enables faster deliveries but also drives cost savings on US tariffs, further strengthening our global service offering.

The Oulu site focuses on the end assembly and testing of specific product families, while other manufacturing steps continue at our high-volume production sites in Beijing and Wuxi, China. Additionally, we maintain small-series production of flat panel detectors in Shanghai. Our Oulu operations have been an integral part of our new product introduction (NPI) process since 2014.

The most trusted partner for X-ray imaging

For the health and safety of people, we equip X-ray systems with high-quality detector solutions and service. Our trusted solutions are the first choice for medical, security, and industrial imaging. We provide one-stop shopping for all detector needs—that makes us unique.

We offer off-the-shelf and customized detectors for original equipment manufacturers (OEMs) and system integrators. Our solutions range from sensor components to optimized detector subsystems with ASICs, electronics, mechanics, software, and algorithms.

Our solutions meet the performance and reliability requirements of the most stringent applications, such as high-end computed tomography (CT) systems. We have what it takes to become a forerunner in photon-counting CT (PCCT) imaging, as we are pioneers in PC and CT detectors. Furthermore, our products are built on modular, scalable, and easily customizable platforms.

We know that tiny details done right make a big difference, and that's why we are always pushing the edge of design for improved quality. When it comes

to people's health and safety, only reliable and robust solutions are acceptable.

More than two billion inspections are performed daily with our technology, and this number continues to grow rapidly. We are known for providing best-in-class X-ray imaging solutions, service, and flexibility, ensuring a unique customer experience every time.

MEDICAL APPLICATIONS

- Computed tomography (CT)
- Dental imaging
- Surgical imaging
- Digital radiography
- Veterinary imaging

SECURITY APPLICATIONS

- Cabin and hold baggage screening
- Parcel and mail screening
- Cargo, container and vehicle screening
- Person screening

INDUSTRIAL APPLICATIONS

- Material sorting in the agriculture, forest, mining and recycling industries
- Production process control and quality inspection in the aerospace, automotive, battery, defense, food, pharmaceutical, renewable energy, oil, and gas industries

Extensive flat panel detector portfolio for global sales

In 2024, one of the most significant milestones in strengthening our product portfolio was the global launch of our expanded X-ray flat panel detector range, now comprising approximately 60 products. The portfolio includes advanced a-Si (amorphous silicon), IGZO (indium gallium zinc oxide), and CMOS (complementary metal-oxide semiconductor) technology-based detectors, optimized for a wide range of industrial, medical, and security X-ray imaging applications.

Our portfolio meets the demands of diverse applications, ranging from battery and electronics inspection to dental and surgical imaging. With a wide selection of panel and pixel sizes, along with various scintillator and interface options, customers benefit from the flexibility and reliability required for specialized imaging needs. Designed for easy serviceability, our solutions provide long-term value, making them a sustainable choice for sophisticated imaging environments.

Smart product selector

Along with our extensive product portfolio, we launched an online product selector. This tool streamlines selection, making it easier and faster to find the right flat panel detector solutions across various X-ray imaging applications.

Leading the way in innovation: All-in-one CT detector system

A good example of our latest innovations is the newly launched all-in-one CT detector system. We believe that this breakthrough positions us at the forefront of next-generation imaging solutions, driving new growth opportunities and long-term value creation.

The solution simplifies data transfer and system architecture while delivering superior performance across medical, security, and industrial X-ray imaging applications. It integrates key components—detector modules, data combiner boards, and optimized slip ring interfaces—offering a scalable, high-speed solution that transfers data from the CT detector system to a host PC at tens of gigabits per second, with future scalability to hundreds.

A key to commercialize photon-counting

The solution debuts with static CT systems, with plans to expand into rotating CT systems and ad-

vanced modalities such as photon-counting CT (PCCT), enabling superior resolution, material differentiation, and reduced imaging time. Designed for seamless integration and cost efficiency, it minimizes supply chain complexities and accelerates time-to-market for OEMs and system integrators.

In our view, this innovation unlocks new possibilities in high-resolution, low-dose imaging, paving the way for next-generation solutions across industries. It is a milestone that brings us closer to fully unlocking the potential of photon-counting applications.

Global trends as growth drivers

AGEING POPULATIONS

boost investments in healthcare.

THE GROWING IMPORTANCE OF SECURITY

boosts public and private sector investments in security.

THE ECO ECONOMY

boosts X-ray demand as green products and services, such as energy harvesting and storing, and electric vehicles, become more common.

THE CIRCULAR ECONOMY

boosts X-ray demand as recycling and material sorting increase.

DIGITALIZATION AND AI

boost X-ray usability as data utilization reaches a new level.

QUALITY AND EFFICIENCY REQUIREMENTS

boost the use of X-rays in quality assurance of materials, components, and processes.

PANDEMICS

boost healthcare investments in developed and emerging countries.

LACK OF RAW MATERIALS

DT-2025 strategy

Our strategic target is to be the growth leader in digital X-ray imaging detector solutions and a significant player in other technologies and applications where we see good business opportunities.

The cornerstones of our strategy are a focus on X-ray technology, customer and equipment specific tailoring, investments in research and product development and geographical reach.

Our asset-light business model enables growth as we focus on our core competencies: technology development, design, critical processes, final assembly, and testing. This business model allows flexibility from design to production and delivery.

Detection Technology's strategy period will conclude at the end of 2025. The company will announce the outcome of the strategy period and the new strategy towards the end of the year.

Driving growth with new operating model

We have changed our operating model as of 1 January 2025 to advance the execution of our strategy and meet the growth targets. Our new sales and product organization consists of three regional business units: APAC, EMEIA, and the Americas.

The new business units have end-to-end responsibility for business development, sales, customer relationship management, and product management within their respective areas. In our view, the change will create a solid foundation for our future growth. The aim of the change is to enhance market and customer orientation, local account management, customer service, as well as competitiveness in a rapidly changing world.

The Group level functions, which include research and development (R&D), operations, HR, finance, and IT have remained the same. In addition, a member responsible for business development was appointed to the management group.

Changes in the management

On 1 January 2025, Bree Allen started as President of the Americas Business Unit and became a new member of the management group. Arve Lukander started as President of the EMEIA Business Unit, Chen Wu as President of the APAC Business Unit, and Juha Talasmäki as Vice President of Business Development.

The members of the management group are President and CEO Hannu Martola, CFO Matti Nylander, President of the Americas Business Unit Bree Allen, President of the EMEIA Business Unit Arve Lukander, President of the APAC Business Unit Chen Wu, Vice President of Business Development Juha Talasmäki, Vice President of People and Culture Sari Holopainen, CTO Jyrki Still, and Vice President of Operations Kai Utela.

Starting from Q1 of 2025, DT will adjust the net sales split reporting method used in its financial reporting to correspond to the new operating model. In the future, DT will report net sales for each region in line with the new geographical division as well as for its three main applications, namely, medical, security, and industrial. DT announced the comparison figures in accordance with the new model on 6 February 2025.

the following financial releases in 2025:

Business review January–March 2025: 24 April 2025

Half-yearly report January–June 2025: 7 August 2025

Business review January–September 2025: 30 October 2025

The Annual General Meeting is on 27 March 2025 at 14:00 (EET).

Detection Technology

Financial statements and Report of the Board of Directors

2024

Report of the Board of Directors

Financial year 2024 in brief

The year 2024 underscores the resilience and efficiency of Detection Technology's operations, even in a turbulent environment. Its competitiveness strengthened, profitability improved, and cash flow increased significantly. The company is well-positioned for new initiatives and future growth.

As in the previous year, the company's business environment was challenging for growth and difficult to predict. Geopolitical situations, superpower relations, the global economy, wars, China's healthcare reform, and price competition created uncertainty. Despite the challenges, the company and its business developed well.

The global competitive landscape was intense, and demand was weak in the medical market in China. Despite growth challenges, the company's total net sales grew, except for Q1, but fell short of the medium-term target. The company's annual total net sales increased by 3.6% to EUR 107.5 million in 2024. The growth was mainly driven by strong demand for security applications but also by industrial sales.

The industrial market returned to a growth path. In addition to the food industry, demand was good in industrial computed tomography (CT) imaging and the specialty tire industry. The annual sales of the Industrial Solutions Business Unit (IBU) grew by 18.2% to EUR 19.0 million. The growth was driven by legacy and TFT (thin-film transistor) flat panel detector sales. IBU's share of total net sales was 17.7%.

The sharp decline in demand for medical X-ray imaging solutions, which began in July 2023, levelled off towards the end of the year. However, China's healthcare reform and the related anti-corruption campaign targeting end operators delayed purchasing decisions throughout the year. Additionally, intensified price competition and uncertainty in the global market reduced the company's medical sales. The revenue of the Medical Business Unit (MBU) decreased by -12.8% to EUR 42.2 million. MBU's share of total net sales was 39.2%.

The security market grew more strongly than previously estimated, with an annual market growth of around 8%. The net sales of the Security Business Unit (SBU) grew significantly in developed markets outside China. Key growth drivers included airport system modernizations and increased global investments in border security. SBU's net sales grew by 17.8% to EUR 46.3 million. SBU's share of total net sales was 43.1%.

There were no significant changes in the geographical distribution of revenue. Although the share of the Asia-Pacific (APAC) countries declined slightly, it remained the company's most significant market with its 67.2% share. Similarly, the share of the five largest customers in total net sales did not change significantly and stood at 52.0%.

Despite moderate net sales growth, Detection Technology's profitability improved throughout the year, both on a year-on-year and quarter-on-quarter basis. The company's operating profit (EBITA) for the 2024 fiscal year was EUR 14.9 million, accounting for 13.9% of net sales. The strong profitability development was primarily driven by improved productivity and a favourable sales mix.

In addition to the profit improvement, the decrease in working capital and strong cash flow are noteworthy. The good profit and strong cash flow enabled the early repayment of the long-term loan taken for the acquisition of Haobo Imaging.

The company decided to expand its production to India, where significant infrastructure investments are being made in healthcare, transportation, and manufacturing industries. The company established a service and production site in the Greater Delhi area, with shipments scheduled to begin in mid-2025. The project is significant from the perspectives of developing local customer service and competitiveness as well as risk management.

Other main events of the financial year included the expansion of EU-origin production. A new facility was opened in Oulu, and the production ramp-up progressed as planned, enabling the company to manufacture 10% of its global product sales in Finland. These measures enhance the customer experience and reduce risks related to macroeconomic uncertainties.

Additionally, Detection Technology made important product launches. The company introduced an all-in-one CT detector system that scales from static CT systems to rotating systems, as well as to future photon-counting CT imaging (PCCT). The company also launched 60 flat-panel detector solutions for global sales.

At the end of the fiscal year, the company announced a new operating model, which came into effect at the beginning of 2025. The new regional business units have taken full responsibility for promoting sales and strengthening customer relationships. This change creates a strong foundation for future growth.

Despite increased turbulence in global markets and intense price competition in China, the year-on-year market outlook has shown improvement. In 2025, the growth drivers will remain the same across all of the company's key markets. Detection Technology has the prerequisites for profitable growth also in 2025.

Net sales and financial result development

The company's total net sales grew by 3.6% (5.3%), totaling EUR 107.5 (103.8) million in January–December 2024. IBU's net sales grew by 18.2% (0.2%), totaling EUR 19.0 (16.1) million. MBU's net sales decreased by -12.8% (0.5 %), totaling EUR 42.2 (48.4) million. SBU's net sales grew by 17.8% (14.3%), totaling EUR 46.3 (39.3) million. IBU generated a total of 17.7% (15.5%) of the company's net sales, MBU a total of 39.2% (46.6%) and SBU a total of 43.1% (37.9%).

Asia-Pacific's (APAC) share of total net sales was 67.2% (68.3%), Europe, Middle East, Africa's (EMEA) 26.7% (18.6%), and the Americas' 6.1% (13.1%) in January–December 2024. The five largest customers accounted for 52.0% (50.7%) of the company's total net sales.

For the review period January–December 2024, the operating profit (EBITA) was EUR 14.9 (8.8) million, 13.9% (8.5%) of net sales. Non-recurring items (NRI) in the review period were EUR 0.0 (0.9) million. EBITA excluding NRI was EUR 14.9 (9.7) million, 13.9% (9.3%) of net sales.

In January–December 2024, the company reversed sales credit loss provisions of EUR 0.2 million. At the end of the review period, the sales credit loss provisions totaled EUR 1.5 (1.7) million.

Financial items totaled EUR -0.4 (-0.9) million, and income taxes were EUR -2.2 (-1.8) million.

The result for the year 2024 was EUR 11.1 (5.5) million. Earnings per share were EUR 0.76 (0.38).

Financial position

Cash flow from operations in January–December 2024 amounted to EUR 20.1 (9.7) million. The company's working capital decreased by EUR 4.9 million during the financial period. Stocks decreased by EUR 1.6 million. Current receivables decreased by EUR 2.9 million. Short-term payables increased by EUR 0.4 million.

Cash flow from financing activities in January–December 2024 was EUR -9.3 (0.6) million. The company repaid loans of EUR 6.0 million from financial institutions. The share of the non-current loans was EUR 4.2 million and the share of the current loans was EUR 1.8 million. A dividend of EUR 3.4 (2.9) million, resolved at the Annual General Meeting on 27 March 2024, was paid.

At the end of the review period, the company's net interest-bearing debt totaled EUR -27.8 (-12.7) million, and gearing was -33.6% (-17.4%).

Cash and cash equivalents amounted to EUR 28.3 (19.1) million at the end of the year 2024.

The company has secured its liquidity by agreeing with banks on lines of credit totaling EUR 24.8 (17.7) million at the closing rate of the review period. At the end of the review period, the unused line of credit was EUR 24.3 (16.7) million.

The loans taken by the company and the parent company's commitments to related entities are presented in the notes to balance sheet.

Key figures of financial performance

	Group 2024	Group 2023	Group 2022	Parent company 2024	Parent company 2023	Parent company 2022
Net sales, EUR 1,000	107,514	103,794	98,580	39,281	30,470	27,462

Research and development

During the financial year January-December 2024, R&D expenses were EUR 11.4 million (11.7), corresponding to 10.6 % of net sales (11.3 %). All R&D costs are written off as expenses.

Personnel

At the end of December 2024, Detection Technology employed 487 people (478). A total of 378 people worked in China, 95 in Finland, 10 in France and 4 in the US. In January-December 2024, personnel expenses totaled EUR 23.9 million (24.1).

Board of Directors and management

The Annual General Meeting resolved that the Board of Directors consists of six (6) members. Marion Björkstén, Richard Ingram, Henrik Roos and Hannu Syrjälä were re-elected while Amy Chen and Jyrki Vainionpää were elected as new members to the Board of Directors.

In its organizing meeting, the Board of Directors elected Hannu Syrjälä as the Chair in accordance with the recommendation of the Shareholders' Nomination Board and Henrik Roos as the Vice Chair of the Board until the next Annual General Meeting.

The Board of Directors has appointed Remuneration and Auditing Committees from amongst its number. The members of the Remuneration Committee have been Hannu Syrjälä, Amy Chen and Henrik Roos. The Remuneration Committee appointed Hannu Syrjälä to chair the committee. The members of the Auditing Committee have been Jyrki Vainionpää, Marion Björkstén and Richard Ingram. Jyrki Vainionpää has acted as the Chair of the Auditing Committee.

The company's President and CEO was Hannu Martola. The company's auditor was Authorised Public Accounting firm KPMG Oy Ab, and Petri Kettunen, Authorised Public Accountant, acted as the Responsible Auditor.

At the end of the financial year, the company's management group members were President and CEO Hannu Martola, CFO Matti Nylander, Vice President of Medical Business Unit (MBU) Chen Wu, Vice President of Security Business Unit (SBU) Arve Lukander, Vice President of Industrial Solutions Business Unit (IBU) Juha Talasmäki, Vice President of People and Culture Sari Holopainen, CTO Jyrki Still and Vice President of Operations Kai Utela.

The company announced on 30 January 2024 that Matti Nylander (M.Sc. Eng., born in 1978) has been appointed Chief Financial Officer (CFO) and a member of the management group at Detection Technology. Mr. Nylander started in his new role on 13 May 2024, and he is responsible for the financial management and information systems of the Group, as well as their global development. Tiina Välkky acted as interim Chief Financial Officer and member of the management group from 1 December 2023 to 12 May 2024.

New operating model and changes in the management group

Detection Technology announced on 29 October 2024, that it will change its operating model and Group's management group in order to advance the implementation of its strategy and meet its growth targets. The new organization and reporting structure entered into force as of 1 January 2025.

The company's new sales and product organization consists of three regional business units: Asia-Pacific (APAC), Europe, Middle East, India and Africa (EMEIA), and the Americas. The Group level functions, which include research and development (R&D), operations, HR, financial administration and IT have remained the same. In addition, a member responsible for business development was appointed to the management group.

On 1 January 2025, Bree Allen started as President of the Americas Business Unit and became a new member of the management group. Arve Lukander started as President of the EMEA Business Unit, Chen Wu as President of the APAC Business Unit, and Juha Talasmäki as Vice President of Business Development.

As of 1 January 2025, the members of the management group have been President and CEO Hannu Martola, CFO Matti Nylander, President of the Americas Business Unit Bree Allen, President of the EMEA Business Unit Arve Lukander, President of the APAC Business Unit Chen Wu, Vice President of Business Development Juha Talasmäki, Vice President of People and Culture Sari Holopainen, CTO Jyrki Still, and Vice President of Operations Kai Utela.

Starting from Q1 of 2025, the company will adjust the net sales split reporting method used in its financial reporting to correspond to its new operating model. In the future, the company will report net sales for each region in line with the new geographical division as well as for its three main applications, namely, medical, industrial and security.

Report on the Corporate Governance

A report on the company's Corporate Governance (CG) has been given for FY 2024. The report can be found on the company's website.

Annual General Meeting

Annual General Meeting (AGM) 2024 of Detection Technology Plc was held on 27 March 2024. The following matters were handled and resolved in the AGM, in addition to the matters referred to in the company's Articles of Association:

1. The company's Board of Directors was authorized to acquire the company's own shares. This authorization amounts to 732,795 shares and is valid until the conclusion of the following Annual General Meeting, but no later than 30 June 2025. At the end of FY 2024, the authorization had not been used.
2. The company's Board of Directors was authorized to issue a total of 1,465,593 new shares in the company. This authorization is valid until the conclusion of the following Annual General Meeting, but no later than 30 June 2025. At the end of FY 2024, the authorization had not been used.

Shareholders' Nomination Board

Based on the holdings on 2 September 2024, the Nomination Board has consisted of the Chair of the Nomination Board Peter Seligson as the representative of Ahlstrom Capital BV; and Head of Investments Tomi Viia representing the OP mutual funds and Director, Sustainability of Aktia Bank Markus Lindqvist representing the Aktia mutual funds. The Chair of Detection Technology's Board of Directors Hannu Syrjälä has served as an expert member of the Nomination Board.

The proposals of the Nomination Board to the Annual General Meeting were published on 17 December 2024. The proposals and the Charter of the Nomination Board are available on the company's website.

Shares and shareholders

The average share price of Detection Technology was EUR 15.84 in January–December 2024. The highest price for 2024 was EUR 20.00 and the lowest EUR 12.15. The closing price at the end of December was EUR 15.30, and the company had a market capitalization of approximately EUR 224 million.

A total of 1.71 million shares, which is 11.7% of the total number of shares, were traded between 2 January and 30 December. The number of shares outstanding in Detection Technology was 14,655,930 at the end of the review period. The company does not hold its own shares, and the authorization given to the Board of Directors by the Annual General Meeting to acquire the company's own shares has not been used.

The number of shareholders at the end of the review period was 4,441. Approximately 73.1% of the shares were held by the ten largest shareholders. The nominee-registered foreign holding of shares in the company was 14.1%.

Detection Technology has one share series, and all shares bear equal voting rights. The company's shares are listed on the Nasdaq First North Growth Market Finland marketplace under the ticker symbol DETEC.

Stock option program 2020

The subscription period of Detection Technology's stock options 2020A1 and 2020A2 terminated on 31 May 2024. The subscription period of stock options 2020B1 and 2020B2 started on 2 May 2024 and will end on 31 May 2025. No subscriptions have been made under the stock option program 2020 during the review period January–December 2024.

The company has one ongoing stock option program 2020. The description and terms of the stock option programs can be found on the company's website.

Share-based long-term incentive scheme

On 1 February 2024, the company announced the decision by the Board of Directors to launch a third PSP program. The performance period of PSP 2024–2026 started in the beginning of January 2024, and it will end at the end of 2026. The potential awards under the performance share plan will be paid in H1 of 2027 as listed shares of Detection Technology.

The primary performance measure on the basis of which the potential share rewards under the PSP 2024–2026 program will be paid is the total shareholder return (absolute TSR) of Detection Technology's share. In addition, performance is evaluated with a sustainability metric, which is connected to the reduction of carbon dioxide emissions.

If all the performance targets set for the PSP 2024–2026 program are fully achieved, the aggregate maximum number of shares to be paid as a reward under the plan is approximately 270,000 (gross earnings before the applicable withholding tax). Approximately 60 people, including the members of Detection Technology's management group, are eligible to participate in the PSP 2024–2026 program.

The PSP 2024–2026 program is part of Detection Technology's share-based long-term incentive scheme established for the company's management and other key employees in 2022. This incentive scheme consists of separate stock award plans, which the company's Board of Directors resolve each year. The performance period of the first performance share plan, PSP 2022–2024, started in the beginning of August 2022, and ended at the end of 2024. The performance period of the second performance share plan, PSP 2023–2025, started in the beginning of January 2023, and it will end at the end of 2025.

Notifications of major holdings

As a result of the amendment in the scope of application of Chapter 9 of the Finnish Securities Markets Act the obligation to notify and disclose major holdings and proportions of voting rights, the so-called flagging obligation, was extended to cover the Nasdaq First North Growth Market Finland market as of 19 April 2024. During the two-month transition period from 19 April to 19 June 2024, current shareholders notified the reaching and exceeding of the 5 percent flagging threshold in their holdings and proportions of voting rights that took place prior to 19 April 2024. Any reaching, exceeding, or falling below the flagging thresholds during and after the transition period must have been notified in compliance with the new regulations. The issuer has the obligation to publish any flagging notifications it receives by means of a company announcement without undue delay.

Detection Technology received a notification intended in Chapter 9, Section 5 of the Finnish Securities Markets Act from OP-Rahastoyhtiö Oy on 22 April. According to the notification, the combined share of the investment funds managed by OP-Rahastoyhtiö Oy in Detection Technology's shares and votes exceeded the 5 percent flagging threshold before 19 April 2024. Detection Technology received a notification intended in Chapter 9, Section 5 of the Finnish Securities Markets Act from Ahlstrom Capital B.V. on 6 June. According to the notification, its share of Detection Technology's shares and votes had exceeded the 30 percent flagging threshold before 19 April 2024.

Detection Technology received a notification intended in Chapter 9, Section 5 of the Finnish Securities Markets Act from Aktia Rahastoyhtiö Oy on 27 June. According to the notification, the combined share of the investment funds managed by Aktia Rahastoyhtiö Oy in Detection Technology's shares and votes decreased below the 5 percent flagging threshold on 27 June 2024.

In H2 of 2024, Detection Technology did not receive any flagging notifications.

Risks and uncertainties

The company's most significant short-term direct and indirect risk factors and uncertainties are changes in geopolitics, in particular changes in the US policies and tariffs by the new Trump administration, changes in the US-China and the EU-China relations, global economic uncertainty, the Russian war in Ukraine and the unrest in the Middle East, along with their ramifications on the global and European security and economy, availability and prices of energy and raw materials and the consequent increase in global political uncertainty may have an adverse impact on the company's business. In addition, challenges in the availability of special materials and electronic components may have an adverse impact on the company's business.

Other risks are related to business operations in developing markets, the changes in the competitive landscape, the ongoing healthcare anti-corruption campaign in China, price competition, a significant share of net sales being generated by the five largest customers, APAC countries' large share of sales, customer liquidity, product quality, the startup of production of new products, exchange rate fluctuations, overall cost development particularly in China, the permanence and competence of personnel, recruitment of experts and organizational efficiency.

The Group has not hedged foreign exchange risks because the Group's sales in various currency areas are sufficiently balanced by purchases in the same areas. Group loans are not covered by interest rate hedging instruments, and consequently possible interest rate changes may impact the company results. The Group has taken measures to protect against material and immaterial damage by obtaining sufficient insurance coverage for its operations.

The Group manufactures high-tech X-ray detectors that meet rigorous quality standards and that are used for the critical applications of the medical and the security industry, in particular. It is possible that, despite on-going quality and assurance mechanisms, errors may occur in the company's design, manufacture and testing processes, due to which the quality of the products may not fully meet customer requirements and thereby cause additional quality

costs for the company. Every product is tested in production, in addition to which statistical design and manufacturing process monitoring systems along with various quality assurance and testing methods are used in both production and product development. The company's management regard these to be adequate to ensure the good quality of products under normal conditions. The Group's key processes in China and Finland are certified to comply with ISO 9001:2015, 14001:2015 and 13485:2016.

The company takes continuous measures to manage the aforementioned risks. Through normal control and precautionary measures, the Company management aims to reduce the impact of risks affecting the company's operational continuity.

Sustainability

Detection Technology is committed to working towards a more sustainable future. The company continued to develop its operating model based on the framework of the Responsible Business Alliance (RBA) and operations so that they would better support the company's sustainable development goals.

In 2024, the themes and subitems of Detection Technology's sustainability agenda remained unchanged from 2023. The company has decided to keep the structure the same in 2025 as well.

Detection Technology achieved all the sustainable development goals set for 2024, except the energy intensity reduction target. Over the years, the company has achieved significant reductions in its energy intensity through various initiatives, including technological upgrades, implementation of best practices, and facilities improvement. From 2025, the company expects a more stable performance in this key area as the most significant opportunity areas have been addressed.

Detection Technology did not receive information on any environmental infringements in the 2024 fiscal year. The company has not received notifications of any infringements of EU or national laws or the company's Code of Conduct through its whistleblowing channel or other reporting channels.

To ensure a strong focus in driving transformation and the achievement of sustainable development goals, sustainability KPIs are included in the company's incentive plans. Short-term incentive (STI) plans apply to all DT employees, and sustainability is integrated as a key metric also in the share-based long-term incentive (LTI) scheme.

The outcomes of the 2024 sustainable development KPIs and the targets set for 2025 are described in more detail in the company's 2024 annual review. In addition, highlights related to the outcome of measures to support corporate social responsibility and the company's RBA framework for sustainable development are also described in the annual review.

In the fiscal year 2024, Detection Technology started preparations for reporting in accordance with the Corporate Sustainability Reporting Directive (CSRD). According to the original EU regulation, Detection Technology is set to fall under the CSRD reporting obligation in 2026 when it publishes the financial statements for the year 2025.

The EU Commission announced on 26 February 2025 legislative proposals aiming to simplify the CSRD reporting obligation. If these proposals are put into effect, they will most likely have an impact on the company's CSRD reporting obligation. In 2025, Detection Technology closely monitors how the situation unfolds and adjusts its CSRD project accordingly.

Events after financial year ended

After the financial year 2024, the company's business has continued as usual, and there have been no exceptional events affecting the business.

Hannu Syrjälä, Chairman of the Board of Detection Technology Plc, passed away due to an illness on 24 February 2025. Detection Technology's Board continues with five members, and Vice Chairman Henrik Roos serves as Chairman until the Annual General Meeting.

Business outlook

Detection Technology expects its year-on-year total net sales to remain stable in Q1 and to achieve double-digit growth in Q2 of 2025.

Geopolitical situation, possible new US import tariffs, U.S.–China relations, global economy, China's healthcare reform, price competition especially in China, the indirect impacts of the war in Ukraine, and events in the Middle East create uncertainty.

Financial targets

Detection Technology aims to increase sales by at least 10% per annum and to achieve an operating margin (EBITA) at or above 15% in the medium term. The company aims to distribute approximately 30–60% of the Group's annual result (earnings per share) to shareholders either in the form of dividend or returned capital.

Board of Directors' profit distribution proposal

The distributable funds of the parent company Detection Technology Plc are EUR 47,714,419, of which EUR 15,177,502 represents the net profit for the financial year. The company's funds eligible for dividend distribution total EUR 19,309,333. After the end of the financial year, there have not been significant changes in the company's financial situation, nor does the solvency test referred to in Chapter 13, Section 2 of the Companies Act affect the amount of distributable funds.

The Board of Directors proposes to the Annual General Meeting to be held on 27 March 2025 that, based on the balance sheet adopted for 2025, a dividend of EUR 0.50 (0.23) per share be paid. The number of shares entitling to dividend is 14,655,930, which means that the total amount of the dividend would be EUR 7,327,965.

Accounting principles for consolidated financial statements

Principles for consolidated financial statements

The consolidated financial statements of Detection Technology Group have been prepared in accordance with Finnish Accounting Standards (FAS) and include all Group companies. Intercompany transactions, receivables and liabilities as well as internal shareholding have been eliminated from consolidated financial statements. The income statements of subsidiaries have been converted to euros by using monthly average exchange rates for the financial period, and balance sheets have been converted by using the official rates at the end of the financial period. Differences arising from the currency conversion as well as the translation of foreign subsidiaries' equity are included in the retained earnings. Cash flow statements of the Group and Detection Technology Plc have been prepared in compliance with the indirect cash flow reporting method described in the general instructions of the Finnish Accounting Board (KILA).

Detection Technology, Inc.	Subsidiary	100 %	United States

Associated companies

The company does not have any associated companies.

Goodwill

The company recognizes goodwill in its balance sheet resulting from acquisition of a subsidiary, in accordance with Finnish Accounting Standards (FAS).

Deferred taxes

The company recognizes material and probable deferred income tax receivables and liabilities. According to the precautionary principle, deferred income tax receivables have not been recognized from subsidiaries operating on loss.

Valuation methods and principles

Inventories under current assets have been valued at variable acquisition cost in accordance with principles in Chapter 5, Section 6 of the Finnish Accounting Act.

Depreciation according to plan has been deducted from the acquisition cost of intangible and tangible assets recorded in the balance sheet. The variable costs incurred from the acquisition and commissioning of the assets have been included in the acquisition cost. Planned depreciations have been recorded as straight-line depreciation based on the economic service life of assets.

Planned depreciation periods for different asset types are as follows:

Intangible rights	straight-line depreciation 3-10 years
Goodwill	straight-line depreciation 10 years
Other capitalized expenses	straight-line depreciation 3-5 years
Machines and equipment	straight-line depreciation 3-10 years

Net sales recognition principles

The sales of products and services are recognized as revenue on delivery.

Conversion of foreign currency items

Foreign currency denominated receivables and liabilities have been converted into euros using the exchange rates on the end date of the financial period.

Events after financial year ended

After the financial year 2024, the company's business has continued as usual, and there have been no exceptional events affecting the business. Hannu Syrjälä, Chairman of the Board of Detection Technology Plc, passed away due to an illness on 24 February 2025. Detection Technology's Board continues with five members, and Vice Chairman Henrik Roos serves as Chairman until the Annual General Meeting.

Auditor's Report

To the Annual General Meeting of Detection Technology Oyj

Report on the Audit of the Financial Statements

Opinion

We have audited the financial statements of Detection Technology Oyj (business identity code 0878389-8) for the year ended 31 December 2024. The financial statements comprise the balance sheets, the income statements, cash flow statements and notes for the group as well as for the parent company.

In our opinion, the financial statements give a true and fair view of the group's and the company's financial performance and financial position in accordance with the laws and regulations governing the preparation of financial statements in Finland and comply with statutory requirements.

Basis for Opinion

We conducted our audit in accordance with good auditing practice in Finland. Our responsibilities under good auditing practice are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are independent of the parent company and of the group companies in accordance with the ethical requirements that are applicable in Finland and are relevant to our audit, and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Responsibilities of the Board of Directors and the Managing Director for the Financial Statements

The Board of Directors and the Managing Director are responsible for the preparation of financial statements that give a true and fair view in accordance with the laws and regulations governing the preparation of financial statements in Finland and comply with statutory requirements. The Board of Directors and the Managing Director are also responsible for such internal control as they determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors and the Managing Director are responsible for assessing the parent company's and the group's ability to continue as a going concern, disclosing, as applicable, matters relating to going concern and using the going concern basis of accounting. The financial statements are prepared using the going concern basis of accounting unless there is an intention to liquidate the parent company or the group or cease operations, or there is no realistic alternative but to do so.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with good auditing practice will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the financial statements.

As part of an audit in accordance with good auditing practice, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the parent company's or the group's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Conclude on the appropriateness of the Board of Directors' and the Managing Director's use of the going concern basis of accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the parent company's or the group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events so that the financial statements give a true and fair view.
- Plan and perform the group audit to obtain sufficient appropriate audit evidence regarding the financial information of the entities or business units within the group as a basis for forming an opinion on the group financial statements. We are responsible for the direction, supervision and review of the audit work performed for purposes of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Other Reporting Requirements

Other Information

The Board of Directors and the Managing Director are responsible for the other information. The other information comprises the report of the Board of Directors and the information included in the Annual Review but does not include the financial statements and our auditor's report thereon.

Our opinion on the financial statements does not cover the other information.

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. Our responsibility also includes considering whether the report of the Board of Directors has been prepared in compliance with the applicable provisions.

In our opinion, the information in the report of the Board of Directors is consistent with the information in the financial statements and the report of the Board of Directors has been prepared in accordance with the applicable provisions.

If, based on the work we have performed, we conclude that there is a material misstatement of the other information, we are required to report that fact. We have nothing to report in this regard.
